

Requirements:

[amazon.com](https://www.amazon.com) seller account

valid bank account

valid credit card

Step 1: Go on <https://www.hackforums.net> and navigate to the marketplace, then navigate to currency exchange and look for Amazon Gift Cards (AGC).

Step 2: Purchase Amazon Gift Cards. Most sellers charge a rate of 70%, which means \$70 will get you \$100 in Amazon gift cards.

Step 3: Create a seller account on [amazon.com](https://www.amazon.com), you will require a valid bank and credit card to do this.

Step 4: Once your account is created, list your item on Amazon (nonexistent item). You will need to list your item to match the exact value of the gift card you have. Here is a tutorial on how to do that made by my team <https://www.youtube.com/watch?v=aAT8Xa4KG5s>

Step 5: Once your item is listed, you will need to use the Amazon account of a friend, or a second Amazon account of your own, to buy your own product using the gift card you bought earlier. For this step it is crucial that you do not link your seller account to your other account, this is why its easier to use a friend.

Step 6: When you get the payment by gift card from yourself or your friend, fulfill the purchase as you usually would and attach any random shipping number you can find.

On a \$140 investment in gift cards you will now have made \$60. If you invest in as much as \$600 worth of gift cards you will now have \$400. This process is easy and can be repeated as many times as you like. If you have any questions or need support through messages or team viewer please add "Trappy#2584 on Discord".
